

BIOLOG TRANSFUSION

RFID BLOOD SUPPLY MANAGEMENT

TRANSFUSION

biolog)id

Connecting healthcare to empower people

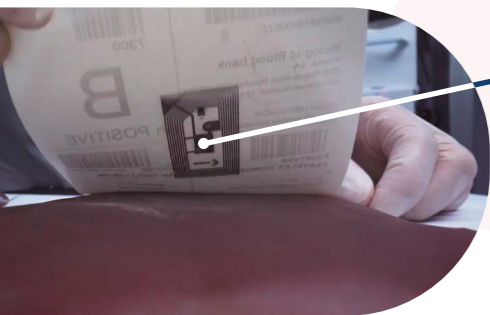

BIOLOG TRANSFUSION

Biolog Transfusion is a modular end-to-end tracking solution that combines software, equipment & tags to manage each application area of the transfusion chain through RFID to blood centers, blood banks and hospitals in real-time.

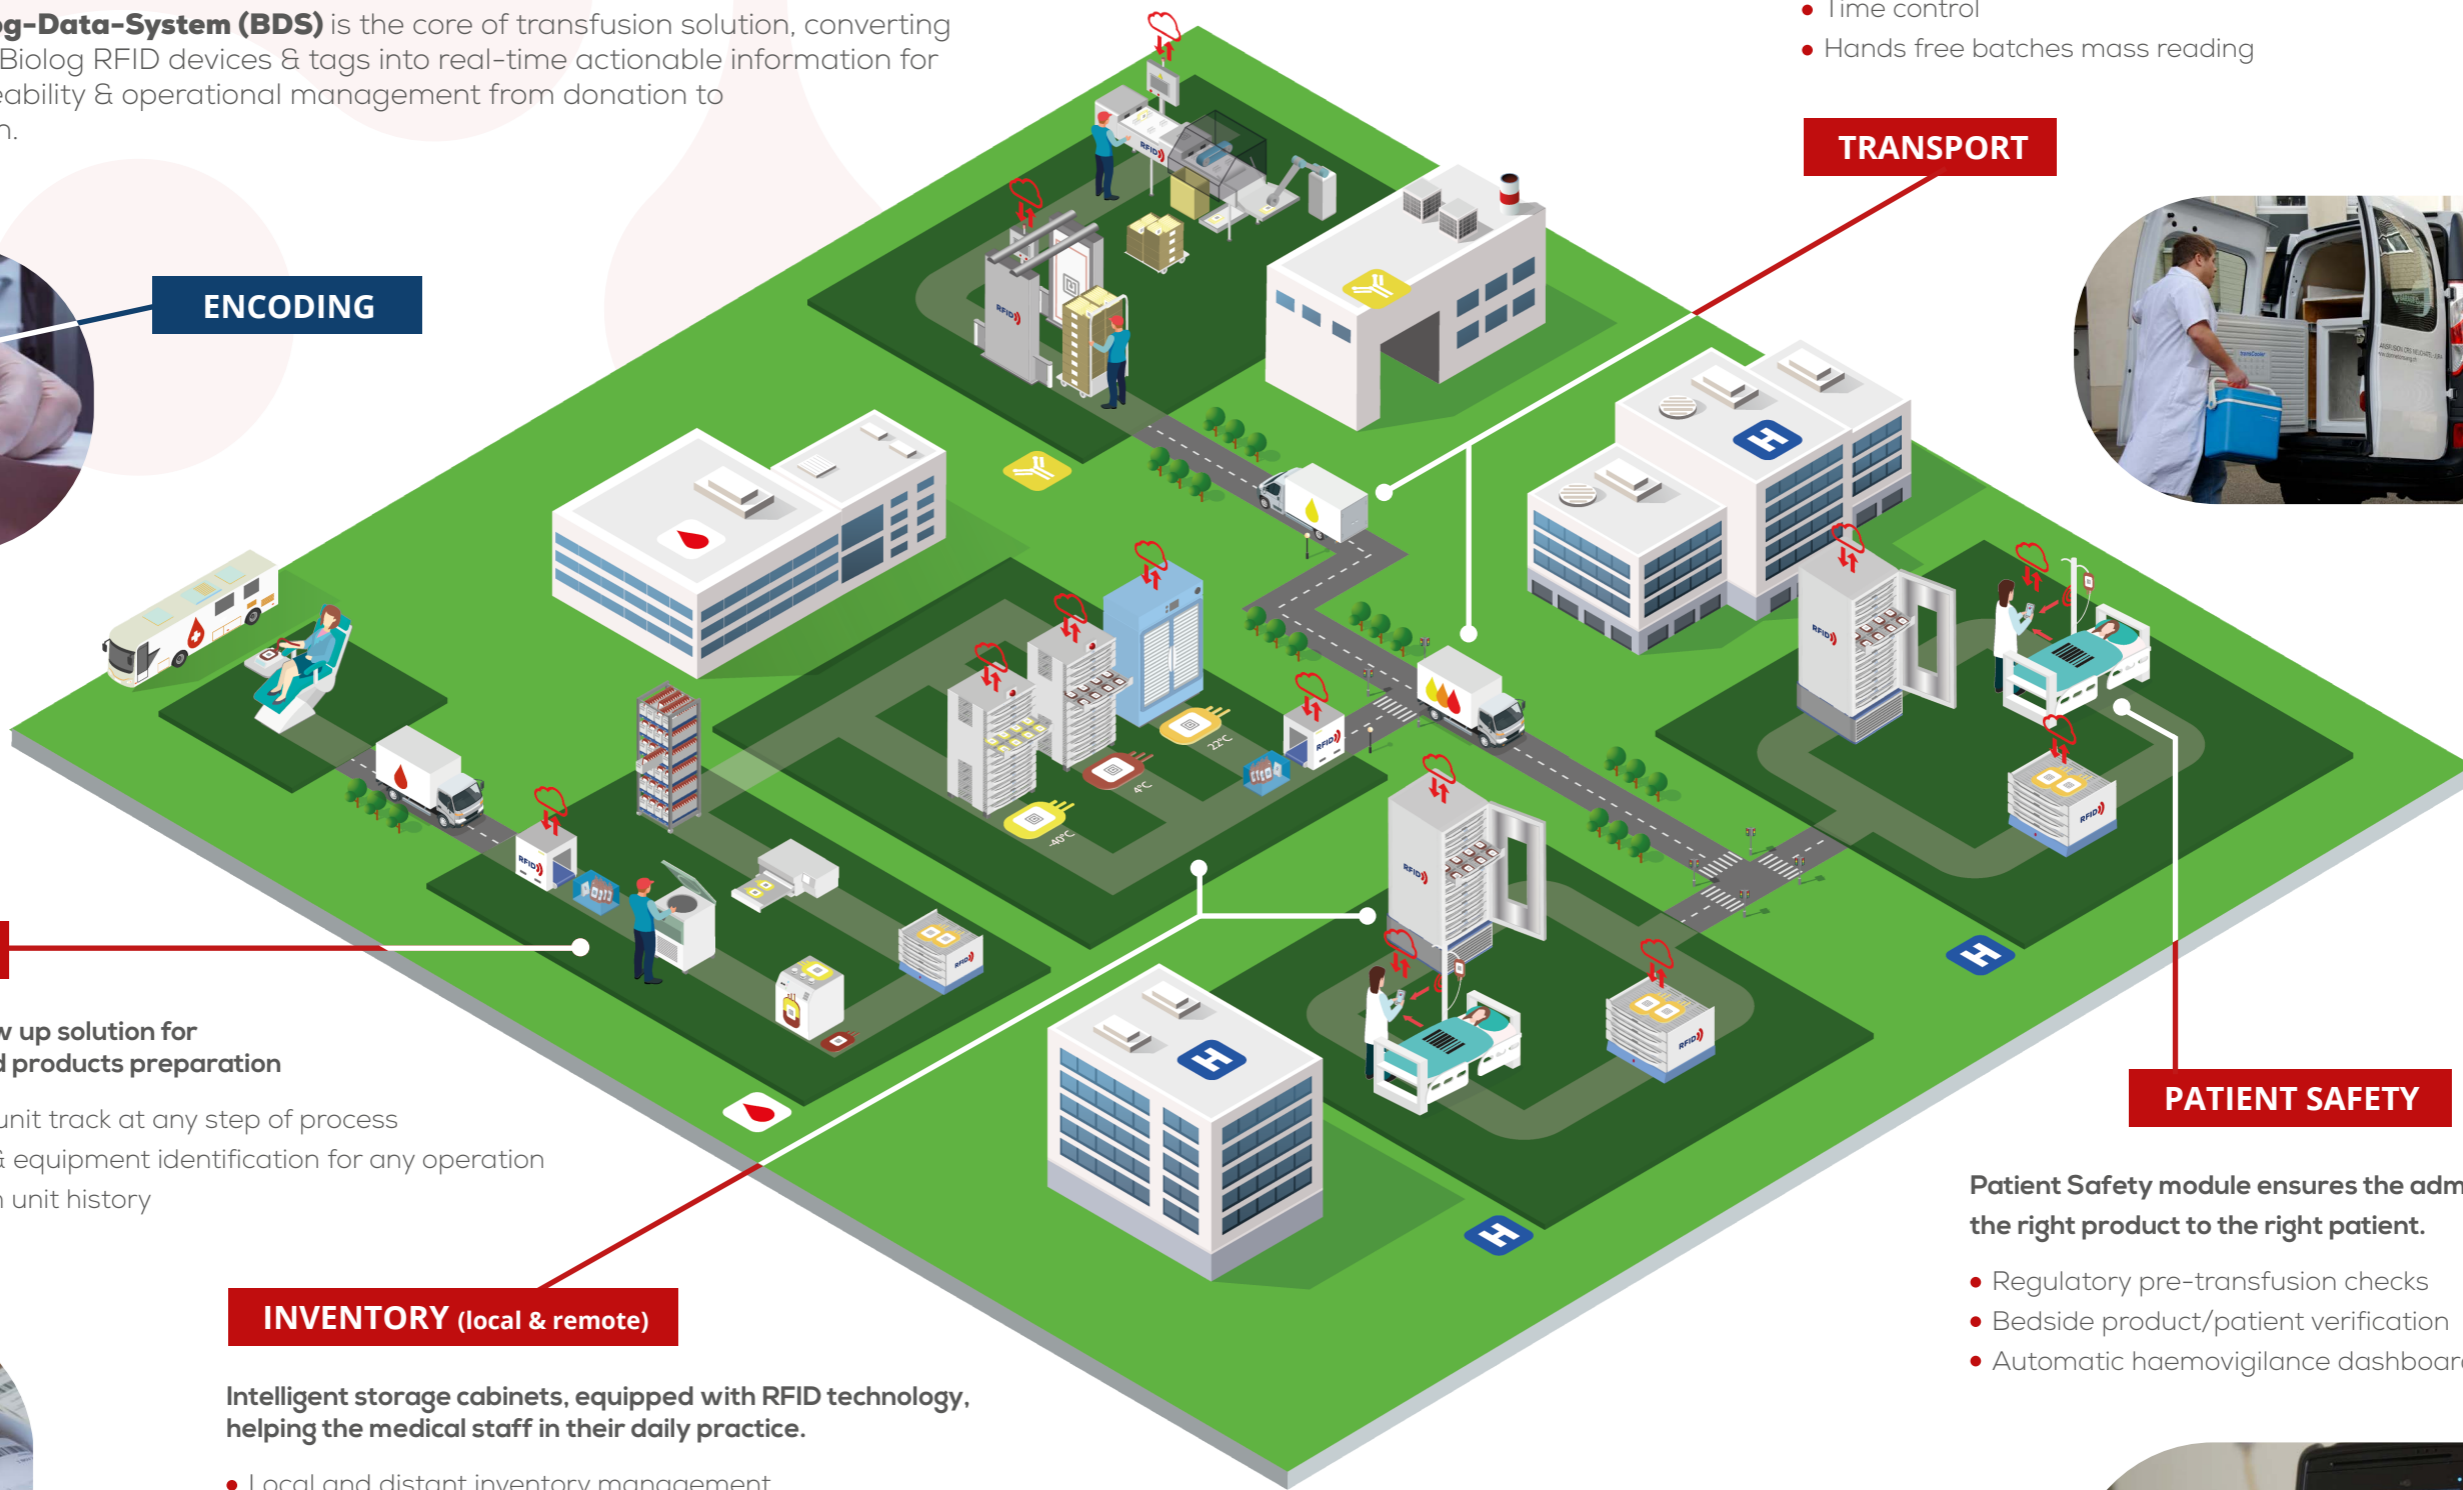

The software Biolog-Data-System (BDS) is the core of transfusion solution, converting data generated by Biolog RFID devices & tags into real-time actionable information for blood product traceability & operational management from donation to patient's transfusion.

A complete tracking solution of healthcare sensitive products from dispatch to reception during transportation.

- Temperature monitoring
- Time control
- Hands free batches mass reading

ENCODING

PROCESSING

A step-by-step follow up solution for any process for blood products preparation

- Blood component unit track at any step of process
- Time stamp, user & equipment identification for any operation
- Dashboard of each unit history

INVENTORY (local & remote)

Intelligent storage cabinets, equipped with RFID technology, helping the medical staff in their daily practice.

- Local and distant inventory management
- Improved shelf-life control
- Patient blood compound reservation
- Exact product location indication
- Multiple storage capacities and blood product types

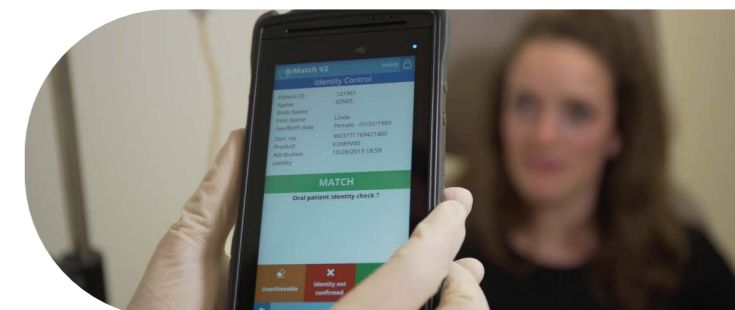

TRANSPORT

PATIENT SAFETY

Patient Safety module ensures the administration of the right product to the right patient.

- Regulatory pre-transfusion checks
- Bedside product/patient verification
- Automatic haemovigilance dashboards

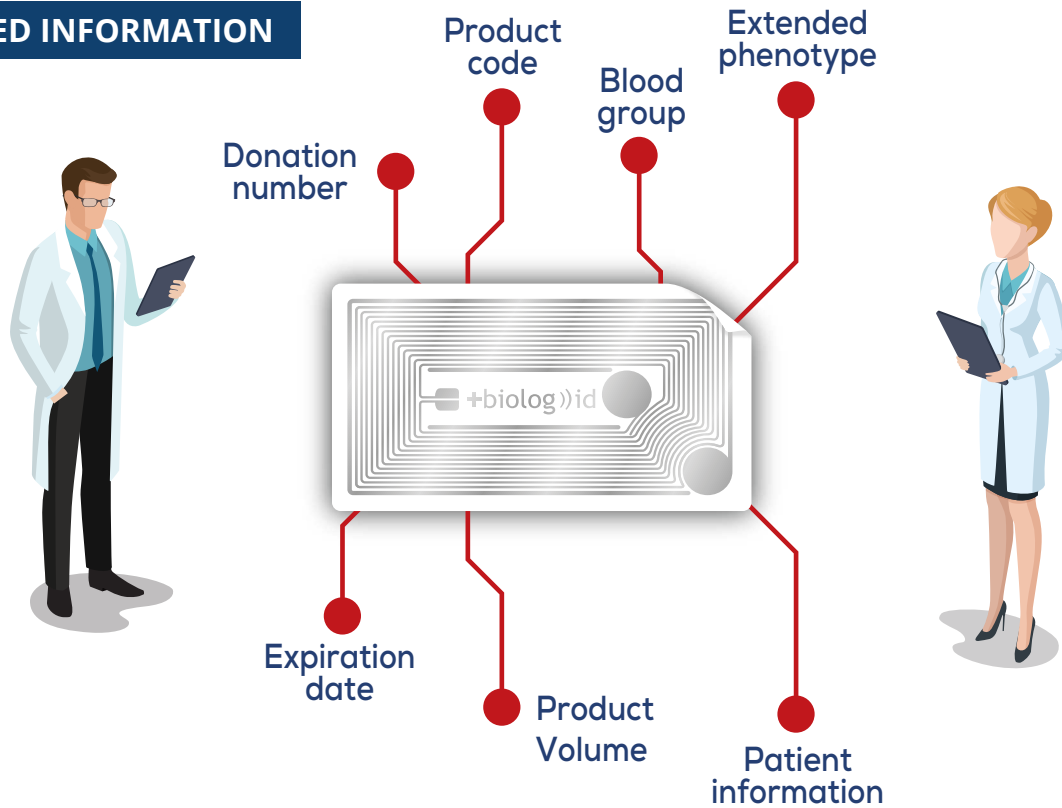

BIOLOG TRANSFUSION

RFID BLOOD SUPPLY MANAGEMENT

Biolog-id's RFID tag conveys the encoded data to the connected devices & software.

ENCODED INFORMATION

Biolog Transfusion solution benefits:

- » Reinforce quality & patient safety
- » Enhance operational efficiency & working conditions
- » Optimize lifesaving resources management
